QuickSourceSM

Complete transportation procurement

A technology leader, Real Time Freight, LLC drives more success than any other solution on the market today. The trademarked Real Time FreightTM solution delivers more features, streamlines communication and offers the easiest and best user experience for each party involved.

The Real Time Freight QuickSourceSM transportation procurement portal enables our customers to host and execute RFP events: a managed event from start to finish. QuickSourceSM is powerful and easy to use. You are guided through an RFP by a fully featured timeline, with alerts to keep you and your transportation partners informed of every step. QuickSourceSM is a fully scalable cloud based application that will exceed your expectations. An average QuickSourceSM RFP can take as little as 2 days with an average savings of 35%.

Develop a complete sourcing strategy with RTF QuickSourceTM.

With a QuickSourceSM RFP you gain visibility into all movements, lanes, capacity and rates. A QuickSourceSM analysis provides a complete study of your lanes, and the RTF RateAnalysisSM will benchmark your rates with your history and the market. This report will help you develop a complete sourcing strategy.

Many organizations avoid procurement events; either they are too costly for the return on investment (ROI), inefficient or ineffective. QuickSourceSM removes these barriers and streamlines the entire process providing capacity solutions across your full network, less dropped loads, lower freight spend and increased business intelligence. Sophisticated monitoring informs you of market changes, and when your rates are out of tolerance.

Contracted rates are closely monitored. Fluctuation and changes in the market will alert you on a lane-by-lane basis removing the guess work and quantifying your ROI per lane. In just a few clicks, rerun the entire RFP or just the lanes where there is opportunity to save.

Award winning technology at work for you.

MARKET RATES

With the RTF Rate AnalysisSM your RFP event reaches a level of sophistication that rivals our competition in three more ways. The process is automated by our technology; all rates are automatically processed on a lane-by-lane basis where rate information is applied to the decision process and saved with the lane.

1

First, we can establish a **target rate** for your lane based on your history and market rates. For example, you can set up the target rate weighted 75% on your history with the lane, and 25% based on market conditions within the last 3 months. The rate will be automatically calculated and saved with the lane, and optionally displayed to your transportation partners.

2

Second, **contracted rates**, will be analyzed with the results of the RFP and compared to your history and the market. Easy to read charts and graphic indicators display your savings and ranked capacity per lane. This benchmark provides sophistication that allows you to go well beyond savings based on current contracted rates.

3

Third, **rate monitor**, the RTF Rate AnalysisSM will alert you when your contracted rates are out of tolerance with the market.

RTF Rate AnalysisSM supports most industry rate engines with complete support for your rate history.

A QuickSourceSM RFP will shorten the lifecycle of the RFP production. It will also shorten the time it takes to review and make decisions on which partners to consider.

The entire process is proven to shorten the cycle of selection and initiation all while bringing a greater level of understanding on value that was previously missing.

The calculated cost savings on average represent nearly 20% of the project cost, proving economic value just in the RFP process alone.

AUTOMATED

Save time and money on your first RFP event, and save even more when rerunning the lanes. Automatically apply your ranking criteria to your RFP, and with one click your lanes will be ranked. Sophisticated setup parameters allow you to define your company criteria and restrictions. Parameters include most used carriers, last used carrier, ranking, best rate and more. In addition, set lane requirements for capacity levels and restrictions based on rates.

EASY TO USE

QuickSourceSM is a fully web based solution with no installed software required (SaaS). Your account is setup and your staff is trained in as little as 2 days as opposed to 2 months. On-line video training is available 24/7. Personal training by our Customer Support group is included. Telephone support is available during business hours (M-F, Central 9am-5pm). Our customer support group will ensure your success.

AFFORDABLE

Flexible plans are available that allow you to purchase just what you need including cost saving annual options. Outsource your RFP events and let our specialized staff run your RFP.

TRANSPORTATION SOLUTIONS

Transportation Professionals choose Real Time Freight because it's easy to use, they make better decisions and get more done faster.

Real Time Freight strongly believes in talking to their customers and understanding their successes, failures and struggles. A strong community is built on its ability to communicate. The Real Time Freight Customer Service team is set up to support relationships, not just users.

We are here to help.
